

## Security

Most everyone deals with secure data in some form. Dealing with the secure data in a professional, and safe way is something we do well. When these services are setup and maintained correctly, your business and your clients benefit:

### Medical and Health Community:

With our secure network services we can help you ensure that your client data stays secure, helping you reach your HIPPA compliancy.

### Business Community:

Client and Business records are critical to the operation of your business. Our secure services will protect you from internal and external threats, making sure your business operates optimally.

### Educational, Library & Governmental Community:

Certified Web Content filtering will help you meet federally mandated CIPA requirements.

### Solutions:

Today, many Small to Medium Enterprises (SMEs) are looking toward Managed Security Service Providers (MSSPs) to provide a one-stop solution for their networking security needs. MSSPs can deploy web content filtering technologies to provide web filtering capabilities for SMEs wishing to control access to inappropriate websites that may expose businesses to potentially liable material, jeopardize network security and consume valuable bandwidth.

### Cost Effective Web Filtering:

Our services can block access to security risk sites such as P2P, phishing and Spyware websites. In addition, our subscription model offers significantly lower costs than competing vendors who offer per-user licensing for web filtering.

### Doing Business Effectively:

Surfing the internet has become a critical part of conducting business, however inappropriate internet usage has led to lower productivity, inappropriate use of the company resources, harassment, legal liability, and human resource issues.

### Increase Productivity and Decrease Liability:

Our service could regulate and provide valuable insight into all Web activities allowing customers to meet new Government Regulations, HR Policies & corporate Internet Usage policies.

### CIPA:

The Children's Internet Protection Act (CIPA) is a federal law enacted by Congress in December 2000 to address concerns about access in schools and libraries to the internet and other information. This law includes measures to block or filter content that: (a) is obscene, (b) contains child pornography, or (c) when computers with Internet access are used by minors, are harmful to minors.

**Protecting Networks,  
One Computer at Time.**

Let Common Sense Security be your central management and monitoring team and easily manage your network with Real Time Protection.

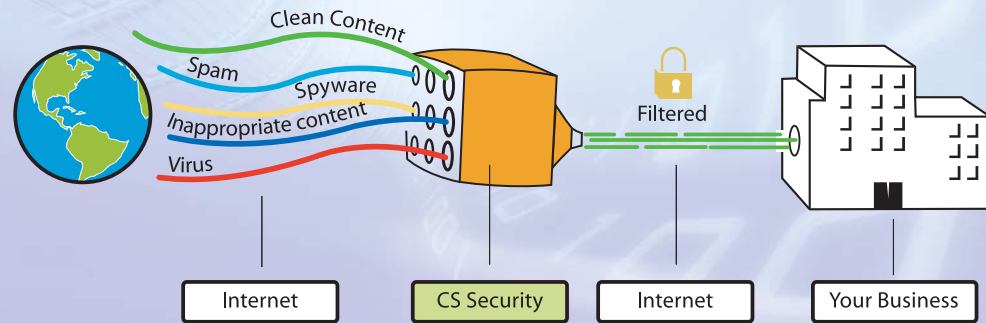

There are tremendous benefits brought about by the Internet, but increasingly there are difficult threats to everyone's network security. This makes it a challenge to manage and protect your network and

puts enormous pressure on the in-house computer staff to monitor, maintain, and stay on top of the latest Security threats. With our 10 years of computer and

networking experience, we have developed a Managed Security service that will protect your business from the constant changing threats of the internet.

### **Internet Threats**

Your network is under attack in various ways:

- Viruses
- SPAM
- Spyware/Phishing
- Instant Messaging Exploits
- Operating System Flaws

With our services, we can stop these attacks before they get inside of your network.

You can have any combination of the products below programmed in your specialized network.

### **Secure Audit**

If you have not had any security in place, you should start at ground zero. CS Secure, can scan your existing equipment for security flaws, as well as perform an audit on how secure your existing environment is.

### **Secure Core**

This is the core of protection for a network: Network wide Anti-Virus, Anti-Spyware, and Intrusion Prevention. This is the first line of defense for your network.

### **Secure Web**

This component includes everything in the Secure Core services AND will keep your users from being able to view objectionable web content either by accidental searching, or by intention. You can choose how strict of filtering you want by selecting up to 53 categories of web content.

### **Secure Mail**

This will filter your email for all SPAM and Junk email. This works with your current ISP, or we can host your email in our secure data center.

### **Secure Hosting**

CS Secure can host your secure web site or application. By doing this, you would limit your exposure to hackers as well as increase your security for your client users.
